

Abstract:

The Chandra X-Ray Observatory was designed for three years of operation with a goal of five. Launched on July 23, 1999 this Great Observatory is now beginning its 8-th year of operation. The Observatory is an outstanding example of one of NASA's technical and scientific success stories. The reasons for that success will be reviewed and some of the outstanding scientific discoveries will be presented.

The Chandra X-Ray Observatory

An Overview of its Success

September 18, 2007
Martin C Weisskopf

The Great Observatories

The Beginning - 1976

- 1976 – Proposal was submitted
 - This was the “formal” beginning

PROPOSAL TO
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
FOR THE
STUDY OF THE 1.2 METER X-RAY TELESCOPE
NATIONAL SPACE OBSERVATORY
(Volume I - Technical Proposal)

P605-4-76

For the period 1 July 1976 to 30 September 1978

Principal Investigator
Dr. Riccardo Giacconi
Associate Director for
High-Energy Astrophysics Division

Co-Principal Investigator
Dr. Harvey Tananbaum

Co-Investigators
Dr. P. Gorenstein
Dr. R. Harnden
Dr. P. Henry
Dr. E. Kellogg
Dr. S. Murray
Dr. H. Schnopper
Dr. L. VanSpeybroeck

April 1976

Smithsonian Institution
Astrophysical Observatory
Cambridge, Massachusetts 02138

Director: Dr. George B. Field

Assistant Director: Mr. John G. Gregory

The Smithsonian Astrophysical Observatory
and the Harvard College Observatory
are members of the
Center for Astrophysics

The Real Beginning - 1963

PROPOSED 30FT ORBITING X-RAY TELESCOPE

A Proposal for

AN EXPERIMENTAL PROGRAM
OF EXTRA-SOLAR X-RAY
ASTRONOMY

Prepared for
National Aeronautics and Space Administration
Washington 25, D. C.

Prepared by
American Science and Engineering, Inc.
11 Carleton Street
Cambridge 42, Massachusetts

25 September 1963

Approved:

Riccardo Giacconi
Riccardo Giacconi
Vice President
Space Research and Systems Division

This document consists of 75 pages.
Copy No. 4 of 1 Series R

ASE Log No. 85-104-6

Smithsonian Institution Archives

X-Ray Astronomy

- Solar Studies in late 40's
 - Solar corona produces X-Rays
- Discovery of first extra-solar source in 1962
 - Also discovery of faint glow - the “diffuse” background

Binary Star System

**Uhuru (SAS-1) Conducted the First
All Sky Survey of Cosmic X-Rays in 1971**

X-Ray Astronomy

- We now know that most of the matter that we “see” is visible to us from its X-Ray emission
- The bulk of this matter is hot, X-Ray-emitting, gas in the great galaxy clusters

CHANDRA X-RAY

DSS OPTICAL

The Third Decadal Survey - 1981

Major New Programs:

#1: An Advanced X-Ray Astrophysics Facility (AXAF)

Astronomy
and Astrophysics
for the 1980's

VOLUME 1:
Report of the
Astronomy Survey
Committee

The Technology Mirror Assembly

- Single mirror pair
- Scaled (2/3) Version of innermost mirrors
- 6-m focal length
 - Allowed for testing in existing test facility
- 0.41-m element length
- 0.42-m diameter
- Gold coated (baseline at the time)

The Technology Mirror Assembly

The Technology Mirror Assembly

- First delivery July 1985
 - Resolution better than 0.5"
 - However, near angle scattering
- Second delivery Jan 1989
- Final results were great
 - E.g. FWHM from 0.36" – 0.68"
 - Encircled energy as predicted

Flight Mirror Blanks

- Initiated purchase in 1987

Other Milestones

- Prime contractor selection – 1988
- “New Start” - 1988
- Selection of the Science Center – 1991
- Started the “VETA” program - 1988
 - Verification Engineering Test Article

VETA

- P1/H1 – uncoated and uncut

- Needed test facility at least one year earlier than planned!

The Veta Tests - 1991

Estimated Mirror Performance on Orbit
Facility Effects Removed Using Lucy Deconvolution of 19 x 19 Scan

Energy: 1.49 keV

The Observatory

Chandra Optics

Properties

- Diameters: 0.65, 0.87, 0.99, 1.23 m
- Segment length: 0.84 m
- Mass: 1484 kg
- Focal length: 10 m
- Plate scale: 49 $\mu\text{m}/\text{arcsec}$
- Field-of-view: 30 arcmin diameter
- Clear area: 1145 cm^2
- Resolution: 0.2 arcsec FWHM
- Surface Roughness: 1.5-3.5 \AA rms
- Coating: iridium

X-ray Calibration (1996-1997)

X-ray Calibration Facility

On to the Cape – Feb 1999

With Upper Stage

Chandra With Chandra

The Crew

Three Launch Attempts

- Mon/Tue July 19/20
 - Sensor spike hydrogen in the engine compartment
- Wed/Thurs July 21/22
 - Lightning in the vicinity
- Thurs/Fri July 22/23
 - Third time is a charm

Launch at last! July 23 1999 @ 12:31 a.m.

X-RAY

Planets

All planets, other than Uranus,
are X-ray sources!

- Jupiter
 - Hot spots at high latitudes
 - *Big surprise*
 - Pulsates (45 minute period)

Jupiter's Moons

Chandra X-ray Observatory ACIS-S Images of Io and Europa

Double Quasar

The Deep Surveys

- 1-Million seconds on Chandra Deep Field-South (CDF-S) and 2-Million on CDF-N
 - *Probe is 80 times deeper at low energies*
 - *800 times deeper at hard energies*
 - *All data publicly available*
 - CDF-N detects about 500 discrete sources and 6 extended sources
- 

Dark Matter

Dark Matter & Dark Energy

COSMOLOGICAL CONSTRAINTS

The Nobel Prize - 2002

Summary

- Operations are running smoothly
- Mission success
 - Design of the Observatory
 - Excellent and committed staff
 - Team effort
- Exciting and fundamental scientific results
 - Papers at a rate of ~10 per week
- Visit our web site @
www.chandra.harvard.edu

Chandra Lifetime

- Fuel: >40 years
- Orbit: 30-50 years
- Funding: NASA committed to (at least) a 13 year mission
